SUMMARY

Software engineer with 4+ years of experience building backend systems, APIs, web platforms, CMS integrations, caching systems, and deployment tooling, currently owning a production web platform end to end.

EXPERIENCE

Vtiger CRM | Software Engineer

Dec 2021 - Present

Bengaluru, India

- Own Vtiger's public web platform end to end as its sole developer: Flask services, REST APIs, Jinja templates, Prismic CMS integrations, and deployments for vtiger.com and product launch pages.
- Designed and migrated Vtiger CRM API integrations for lead and contact capture from a legacy ECS API to the One Instance API. Covered record lookups and updates, field mapping, duplicate handling, GeoIP and device metadata, cross-domain UTM attribution, logging, and retries.
- Redesigned the CMS caching path across Redis and MongoDB using stale-while-revalidate reads, webhook-driven rebuilds, and last-known-good fallbacks. An earlier cache rollout cut CMS content latency by about 50%.
- Hardened public forms and CMS webhooks with authenticated endpoints, reCAPTCHA v3, input validation, XSS fixes, structured logging, and guarded operations tools.
- Revamped marketing site templates and CMS slices with Tailwind CSS v4 and JavaScript, modernizing layouts, typography, and responsive behavior across product and landing pages.
- Built AI-assisted engineering workflows with Pi and OpenCode for codebase navigation, implementation planning, code review, browser QA, regression checks, and technical documentation. Added repository guidance and reusable checks to keep agent-generated changes reviewable.
- Automated staging and production delivery with Ansible, Docker, Apache, uWSGI, health checks, issue-linked branches, browser-console checks, and branch-safe deployments.

SELECTED PROJECTS

LocalForge

FastAPI, React, TypeScript, Docker

Local-first developer utility suite with file conversion, data tools, mock APIs, network helpers, and a GitHub-backed architecture decision logger.

ProxiTorrent and protocol experiments

Node.js, Python, UDP, TCP

BitTorrent tracker and peer-discovery prototypes with bencoded metadata parsing, SHA-1 info hashes, UDP tracker requests, and transaction tracking.

SKILLS

Languages: Python, JavaScript, TypeScript, SQL, HTML, CSS

Backend: Flask, FastAPI, Node.js, Express, REST APIs, Jinja2

Frontend: React, Next.js, Vue.js, Tailwind CSS

Data: Redis, MongoDB, PostgreSQL, MariaDB, caching, webhooks

Infrastructure: Linux, Docker, Ansible, Apache, uWSGI, CI/CD

AI-assisted engineering: Pi, OpenCode, code review, browser automation, agent workflows

CMS & APIs: Vtiger CRM APIs, Prismic CMS

EDUCATION

Bachelor of Technology, Electrical and Electronics Engineering

2016 - 2020

JNTUA College of Engineering, Pulivendula
